

# Open House: Come See the Light!

Saturday - February 6<sup>th</sup> 10AM-1PM & 2PM-5PM

The most advanced lighting technology available today, LEDs offer a variety of distinct advantages over its competition. Improved efficiency offers unmatched energy and cost savings and its long life expectancy is over 4x's more than other lighting technologies. But what's more is that LEDs offer new lighting design options that were not possible with traditional light sources.

Lighting has evolved into a sophisticated design element of the modern home, whether traditional or contemporary in style. Every aspect of lighting -- placement, function, control, style -- can be designed to offer precisely what is needed in a particular room and for particular tasks. Lighting controls have also advanced to provide further opportunity for energy savings, convenience, and offer the ability to create a customized ambiance. All of these features, when carefully planned and designed, help to create beautiful, efficient, and effective lighting throughout the home.

Newport Ventures, in conjunction with Belmonte Builders and Lutron Controls invite you to come see what LEDs can do for your home! Designed by renowned local lighting professional Jan Moyer, we have installed a 100% LED lighting system, complete with Lutron's new Caséta Wireless lighting control package in one of Belmonte's outstanding new homes!

## Come experience the LED difference!

- ✓ **Tour the home and learn about lighting design**
- ✓ **Participate in lighting & control demo's**
- ✓ **Get info on NYSERDAs statewide LED Project**
- ✓ **Get answers to all your LED questions!**

**6 Calvin Court, Saratoga Springs, NY**
